

IMPACT®

Herbicide

PROVEN PERFORMANCE IN POSTEMERGENCE CONTROL

A powerful force in postemergence control, **IMPACT**® herbicide offers producers outstanding control of broadleaf weeds along with remarkable grass control. And **IMPACT** sets the standard for safety in all types of corn: field; seed; sweet and popcorn.

Corn producers throughout the Midwest report excellent results in widely varying environments and growing conditions.

From planned programs, including two-pass sequential and total postemergence, to challenging

applications due to weather delays and other unforeseen complications — **IMPACT** herbicide has proven to be the right choice, as well as the problem solver.

With no known weed resistance to **IMPACT** herbicide and its broad spectrum of weed and grass control, **IMPACT** is an ideal partner for managing those tough to control weeds or biotypes resistant to glyphosate, atrazine or ALS herbicides in conventional, Roundup Ready®, Clearfield® or LibertyLink® hybrids.

IMPACT®

Herbicide

IMPACT – the broadleaf herbicide that controls grasses, too. For superior performance and safety in all types of corn, choose **IMPACT** herbicide.

IMPACT®

Herbicide

Unique HPPD-Inhibitor

Powered by the active ingredient TOPRAMEZONE, **IMPACT** herbicide delivers unparalleled control of *both* broadleaf and grass weeds among the HPPD herbicides. Absorbed by leaves, roots and shoots, **IMPACT** interferes with plant photosynthesis. "Bleaching" of weeds is evident and exposure to sunlight kills target broadleaf weeds and grasses.

Use Rates and Additives

For best results, apply **IMPACT** herbicide at 0.75 fl oz/ac + MSO at 1 gal/100 gal + Ammonium sulfate (AMS) at 2.5 lb per acre (liquid AMS at equivalent rates may be used). When treating corn up to 12 inches tall, atrazine at 0.25 - 1.5 lb/ac may be added to the mixture for improved burndown and added soil residual weed control.

THE STANDARD IN CORN SAFETY™

Unequaled in crop safety, **IMPACT** herbicide is the safe choice on all types of corn including field corn, seed corn, sweet corn and popcorn.

Proven Control of Broadleaf Weeds

IMPACT herbicide provides excellent postemergence control of major annual broadleaf weeds in corn, such as velvetleaf, cocklebur, pigweed, waterhemp, lambsquarters and ragweed; including those tough-to-control weeds or biotypes resistant to glyphosate, triazine or ALS herbicides.

Broadleaf Weeds Controlled

- Amaranth, Palmer and Powell
- Burcucumber
- Carpetweed
- Chickweed, Common
- Cocklebur, Common
- Dandelion*
- Galinsoga, Hairy
- Henbit
- Horseweed (Marestail)
- Jimsonweed
- Kochia
- Lambsquarters, Common
- Lettuce, Prickly
- Mallow, Common and Venice*
- Morningglory sp.
- Mustard sp.
- Nightshade, Black, Eastern Black and Hairy
- Pigweed, Prostrate, Redroot, Smooth and Tumble
- Pusley, Florida
- Ragweed, Common and Giant
- Shepardspurse
- Sida, Prickly
- Smartweed, Ladysthumb and Pennsylvania
- Sunflower, Volunteer and Wild
- Thistle, Canada* and Russian
- Velvetleaf
- Waterhemp, Common and Tall

* Partial control

IMPACT Controls Key Grass Weeds

The unique chemistry of **IMPACT** herbicide not only controls tough broadleaf weeds, it provides extra power that cleans up problem grasses in corn.

Grass Weeds Controlled

- Barnyardgrass
- Crabgrass, Large and Smooth
- Cupgrass, Woolly**
- Foxtail, Giant and Green
- Foxtail, Yellow**
- Goosegrass
- Johnsongrass, Seedling**
- Millet, Wild-Proso
- Panicum, Fall**
- Shattercane*
- Signalgrass, Broadleaf**

* Partial control

Partial control with **IMPACT at 0.75 fl oz/A.

For control of these grass species use **IMPACT** at 1.0 fl oz/A under a supplemental use label.

Freedom of Choice

The flexibility of **IMPACT** herbicide offers producers a wide-range of options for application timing, tank mix partners, corn safety and rotational practices:

- Wide window for postemergence application — anytime after corn emergence until 45 days before harvest — early to late post.
- Excellent performance in a two-pass program following a soil applied herbicide.
- Low use rates offer convenience and an SC formulation allows for easy mixing.
- Compatible in tank mixes with postemergence corn herbicides.
- Can be used safely with soil and foliar insecticide programs in corn.
- May be applied to inbred lines used in field corn, sweet corn and popcorn seed production.
- Provides flexibility with major rotational cropping.

IMPACT — The Glyphosate Tank Mix Partner of Choice

- Controls tough broadleaf weeds such as waterhemp, ragweeds, pigweeds, lambsquarters.
- Fits weed resistance management programs.

Get more out of your postemergence program — get the proven performance and the standard in corn safety — IMPACT herbicide.
